PROFESSIONAL SUMMARY

Software Engineer with experience developing Java desktop applications, business automation tools, and enterprise software solutions. Experienced in object-oriented programming, automation, software testing, debugging, and building applications that improve operational efficiency. Combines hands-on technical operations experience with software development to deliver reliable business solutions.

TECHNICAL SKILLS

- Languages: Java, C++, JavaScript, SQL, Rust, R
- Frameworks & Tools: JavaFX, Gradle, Apache POI, Git, GitHub, JUnit, FastAPI
- Databases: SQLite, SQL
- Concepts: Object-Oriented Programming, Data Structures & Algorithms, REST APIs, Software Testing, Debugging, Agile Development

EXPERIENCE

2019 – Present

Voting Machine Technician, Harp Enterprises

Lexington, Kentucky

- Designed, developed, tested, and maintained Java desktop applications that automated business workflows including election equipment labeling, inventory management, technician scheduling, and operational reporting.
- Designed and implemented business automation tools using Java, Apache POI, PDF generation libraries, and Gradle to streamline workflows and reduce manual processing.
- Created software that generated voting machine labels and inventory reports from Excel election plans, improving operational accuracy.
- Built an automated scheduling application that converted technician assignments from Excel into iCalendar (.ics) files.
- Gathered business requirements from internal stakeholders and translated operational needs into software solutions that improved efficiency and reduced manual processes.
- Performed software testing, debugging, maintenance, and feature enhancements for internal business applications.
- Configured, deployed, tested, and supported integrated hardware and software systems used in local and state elections.
- Diagnosed and resolved software, firmware, hardware, and networking issues in mission-critical election environments.

2015 - 2019

Executive Assistant, Paris/Bourbon County Economic Development Authority

Paris, Kentucky

- Provided administrative and operational support while coordinating projects, maintaining records, and communicating with businesses and government stakeholders.

SOFTWARE PROJECTS

RMA Tracker (Java, JavaFX, SQLite)

- Designed a desktop RMA management application featuring CRUD operations, reporting, backup/restore, search, filtering, and PDF/Excel exports.
- Implemented SQLite database integration, automated backups, reporting, search, filtering, and printable PDF reports using JavaFX and object-oriented design principles.
- Designed a modular JavaFX application using object-oriented principles with SQLite persistence, automated backup/restore, PDF reporting, and advanced search and filtering capabilities.

Election Equipment Label Generator (Java, JavaFX, SQLite, Gradle)

- Built a Java application that automatically generates PDF voting machine labels from county election plans.

Election Inventory Management System (Java, JavaFX, SQLite, Gradle)

- Developed a reporting application that calculates election equipment inventories and generates Excel reports.

Election Scheduling Calendar Generator (Java, Apache POI)

- Created software that parses Excel schedules and generates iCalendar files for automated technician scheduling.

EDUCATION

December 2025

Bachelor of Science, Computer Science

Old Dominion University

December 2016

Bachelor of Business Administration, Marketing

University of Kentucky
